30A Class J Fused Switches

60A Class J Fused Switches

MERSEN'S COMPACT FUSED SWITCHES - NOW IN CLASS CC AND CLASS J MODELS

Mersen's Compact Fused Disconnect incorporates switch functionality with the high protection level of a fuse. The Class CC switch accepts UL Class CC fuses up to 30A, while the new Class J switch accepts UL Class J fuses up to 60A. All of Mersen's Compact Fused Disconnects are UL 98 Listed and suitable for use as main/feeder devices and, in conjunction with the corresponding fuses, are rated for branch circuit protection. They have a smaller footprint compared to a traditional Class CC and J disconnects with a max interrupting rating of 200kA.

The compact form factor and ease of installation makes these switches a great choice for panel builders. The easy lockout/tagout feature and IP20 rating ensures additional safety along with the built-in switch capability.
